

Git & GitHub : Distributive Version Control System

Steps:

1. Download and Install git using `git-scm.com`
2. Create folder for your project or right click to your available project
3. Click on Git Bash Terminal
4. To convert your project folder into repository use:
`git init`
5. To check the current status use :
`git status`
6. Inorder to convert from untrack to track use:
`git add -A`
7. To config globally git to your computer use
 1. `git config --global user.name "<Your Name>"`
 2. `git config --global user.email "<Your Email>"`
8. To save in your folder use:
`git commit -m "<Your Message>"`
9. Goto `github.com` and signup
10. Create New Repository on `github.com`
11. Copy link from `github.com`
12. Goto git bash again and write command
`git remote add origin <LINK>`
13. Inorder to push your code to `github.com` use:
`git push -u origin master`
14. Authenticate from your account to push code

```
USER@DESKTOP-T61Q30H MINGW64 ~/Desktop/Kuch bhi
$ git init
Initialized empty Git repository in C:/Users/USER/Desktop/Kuch bhi/.git/

USER@DESKTOP-T61Q30H MINGW64 ~/Desktop/Kuch bhi (master)
$ git status
On branch master

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    Practise.ipynb

nothing added to commit but untracked files present (use "git add" to track)
